

11. Debug and Test with DevTools and VS Code

1. Open Chrome DevTools: Press F12 or Ctrl+Shift+I.
2. Use Device Toolbar: Press Ctrl+Shift+M to simulate mobile and tablet screens.
3. Inspect Elements: Right-click an element and choose Inspect to view applied CSS.
4. Test CSS Values Live: Modify CSS values in the Styles panel and see changes instantly.
5. Check External CSS Loading: Open Network tab, refresh the page, and verify styles.css shows 200 OK.

If CSS is not loading, check the link tag and file path. A 404 Not Found error indicates a wrong path.

VS Code Tip: Use the Live Server extension and open index.html with Live Server for automatic page refresh.

Quick Interview Points:

F12 → Open DevTools | Ctrl+Shift+M → Device Toolbar | Network Tab → Check resource loading | 200 OK → Success | 404 → File not found
